

WEEKLY INTERNSHIP REPORT

Week No.: 5	Date: 29/06/2026 – 05/07/2026
Intern Name: Aditya Pawar	

Task Given by Supervisor:

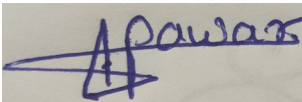

- Set up the development environment and backend project structure for VeriMind.
- Design the modular folder structure for the multi-agent architecture.
- Create the FastAPI skeleton with a health check endpoint.

Work Completed This Week:

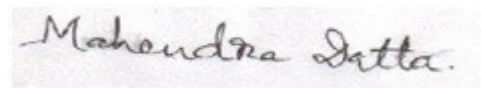

- Set up the **Python virtual environment** and installed **FastAPI**, **Uvicorn**, **LangGraph**, and **LangChain** libraries.
- Created the **backend structure** with separate agents, rag, and models modules.
- Defined the **Pydantic schemas** for request and response models.
- Implemented the **GET /health** endpoint, enabled **CORS**, and configured API keys through the **.env** file.

Remark by Supervisor:

The intern completed the environment setup and modular backend structure on time.
The foundation is clean and ready for feature development.
