

WEEKLY INTERNSHIP REPORT

Week No.: 7	Date: 13/07/2026 – 19/07/2026
Intern Name: Aditya Pawar	

Task Given by Supervisor:

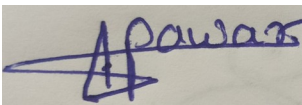

- Implement the retrieval component of the RAG pipeline.
- Add persistent storage and document management endpoints.

Work Completed This Week:

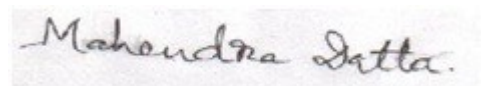

- Implemented the **Retrieve** component using **TF-IDF** and **cosine similarity** to fetch the top relevant chunks.
- Evaluated TF-IDF against embedding-based retrieval and selected TF-IDF for being **lightweight and dependency-free**.
- Added **pickle-based state persistence** so documents remain available after restart.
- Developed the **GET /document/info** and **DELETE /document** endpoints.

Remark by Supervisor:

The retrieval module works accurately and efficiently. The intern justified the design choice with proper comparison and testing.
